About the Seminar

India is witnessing a significant boom in the construction of concrete bridges, ports, buildings, etc. in marine/coastal environment. Some of these concrete structures are designed for the service life 100+ years. However, many are experiencing premature corrosion and not able to meet the design life requirements due to chloride-rich environment. Almost 50% of the concrete structures today experience a repair within about 10 years. India spends about ~1 to 2 % of GDP in addressing the corrosion issues in concrete infrastructure. If we do not take adequate measures in this regard, then the future India will have to face expensive repair works on the large number of concrete structures that are being built now. This seminar series is formulated to educate our engineers on how to combat corrosion in concrete structures with a blend of both theoretical & practical aspects.
