Organise a International Webinar on

CASE STUDIES ON FAILURE, REPAIR AND REHABILITATION OF STRUCTURES

on

01st November, 2021

Program Overview

The investigations of structural failures is also a field of engineering where many engineers dip in an out of in the course of their work. An engineer can sometimes be called upon to help stabilise a structure that has been damaged by fire, impacts or some sort of structural failure. This webinar will provide adequate knowledge for an engineer to investigate failed or damaged structures from experts of national and international experience. This is a form of risk management; it's far better to learn from someone else's mistakes than your own. The fields of concrete repair, rehabilitation and retrofitting, as well as concrete durability and structural performance remain some of the most relevant for modern civil and structural engineering. Hence, this webinar is focused to gain knowledge from various case studies from International Experts to cater the engineering community.
